

A detailed line drawing of a robot's head and arm, rendered in a minimalist, sketch-like style. The robot has a helmet-like head with a circular sensor or eye on the left side. Its arm is extended, with a hand that has multiple fingers, some ending in small circular tips. The drawing is positioned on the left side of the slide, partially overlapping the text area.

Autonomous System Lab @ TUDa

Homepage: <http://www.ausy.informatik.tu-darmstadt.de/>

Intelligent Autonomous Systems (IAS)

- Head: Jan Peters (mail@jan-peters.net)
- Founded in June 2011
- Focus on *Robotics and Machine Learning*

Computational Learning for Autonomous Systems (CLAS)

- Head: Gerhard Neumann (geri@robot-learning.de)
- Founded in Sept. 2014
- Focus on *Algorithms for Autonomous Learning Systems*

15+ Team members, 5+ international projects, many top publications and awards

Self-Introduction: Teaching Assistants

- Daniel Tanneberg is a Ph.D. student at the Intelligent Autonomous Systems (IAS) Group at the Technical University of Darmstadt since October 2015. His Master thesis' title was Spiking Neural Networks Solve Robot Planning Problems. His focus in Computer Science lies on Machine Learning and related fields. Additionally he studied "Biological Psychology" as a minor. You can contact him by email at tanneberg@ias.tu-darmstadt.de.

- Marco Ewerton is a Ph.D. student at the IAS since January 2015. He works on the BIMROB project, which investigates how humans and robots can improve their movements by interacting with each other. Before his Ph.D., Marco completed his Master Degree in Electrical Engineering at the TU Darmstadt. You can find him in the Robert-Piloty building S2 | 02 room E226. You can also contact him through ewerton@ias.tu-darmstadt.de.

YOU WILL **NOT** RECEIVE EMAILS OTHERWISE!

Course Language

...will be **ENGLISH**

Why?

- Essentially *all* machine learning literature is in English.
- Knowing the proper *terminology* is essential!
- It's a good training for you
- Questions and answers in emails/homework/exams may be given in **German** (However, this is not encouraged...).

Interaction: Answers & Questions

Any Questions?

Interaction: Answers & Questions

Any Questions?

Feel free to ask questions in class or by email.
We are happy to answer them.

Interaction: Answers & Questions

When you answer or ask a complex question,
your classmates may snigger at you!

Hence, your professor rewards good
answers & questions with a snickers bar!

snigger = a smothered or half-suppressed laugh

Feedback: Essential for both sides...

I appreciate
FEEDBACK!

Jeder Prof hat 'ne Meise. Meine duerfen Sie fuettern!

Speed Control

- I tend to go sometimes too slow but also too fast.
- Tell me to speed up or reduce speed.
- The speed is up to you...

by
Students

iPython Scribes

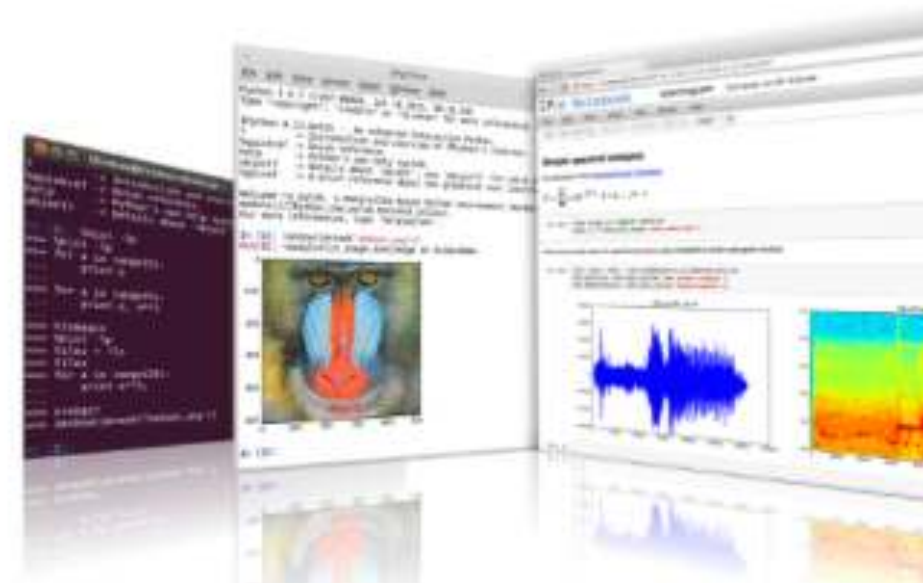

- Every term, we notice that students would like a script.
- This semester **YOU** can do something about it!
- Being a Scribe in a group of two will count as much as the other homework together.
- We will **massively support** you at the job.
- Do you prefer topic-based or lecture-based?
- Teams of two! **Which team want to be Scribe for next week? (2 teams max!)**

IP[y]: IPyt Interac

[Install](#) · [Documentation](#) · [Project](#)

IPython provides a rich architecture for

- A powerful interactive shell.
- A kernel for [Jupyter](#).
- Support for interactive data visualization.
- Flexible, [embeddable](#) interpreters to
- Easy to use, high performance tools

iPython Scribe

- Check out:
 - <https://www.youtube.com/watch?v=QE7UzVG1o-I>
 - http://nbviewer.ipython.org/github/SheffieldML/notebook/blob/master/lab_classes/ambassadors/movie_recommender.ipynb

Exam & Bonus Points from Homework

There will be a written exam ...

- Approximate date: The week after the end of classes...
- Homework will count as bonus points! 100% of Homework = +1.0 grade

Homework Exercises:

- We only use them for bonus points!
- Groups of 2 and they stay the same the whole semester!
- However, expect that details are asked in the exam.

Homework Assignments

There will be **4 homework** assignments!

Each assignment will contain

- a few multiple choice questions,
- a few essay questions,
- and a programming exercises (Python).

Background Reading

There is no course text ... yet! See the iPython notebooks.

Most will be papers & tutorials (see homepage)!

Classical background reading...

- **on robotics:** *B. Siciliano, L. Sciavicco: Robotics: Modelling, Planning and Control, Springer, 2009.*
- **on machine learning:** *C. Bishop: Pattern Recognition and Machine Learning, Springer, 2006.*
- **on reinforcement learning:** *R. Sutton, A. Barto: Reinforcement Learning, MIT Press, 1998.*

How does it fit in your course plan?

Related Classes:

- **Improve Foundations:** Grundlagen der Robotik (WiSe)
- **Useful Techniques:** Optimierung statischer und dynamischer Systeme
- **More (un-)supervised learning:**
 - Maschinelles Lernen: Statistische Methoden (SoSe),
 - Probabilistische Graphische Modelle [=Maschinelles Lernen: Statistische Methoden 2] (WiSe),
 - Data Mining und Maschinelles Lernen [=Maschinelles Lernen: Symbolische Ansätze] (WiSe).
- **More Autonomous Systems:**
 - Intelligente Multi-Agent Systeme (SoSe) **(New Lecture!)**

Your way to the thesis...

Theses:

- Our class brings you right to **B.Sc. or M.Sc.** Thesis level (checkout our homepage)
- If you want to do your Ph.D. (=Dr) in Robot Learning, our classes plus all of the above are guaranteed to be optimal.
- Currently 19 Thesis are supervised by the Autonomous Systems Labs
- Many Master and Bachelor Theses end up in a **Publication!**

How does it fit in your course plan?

- **B.Sc. / M.Sc. Informatik:**

- Computational Engineering (see Modulhandbuch), Not DKE
- If you are strongly interested in machine learning you should:
 - Take Statistical Machine Learning for HCS credit
 - Take Data Mining and Machine Learning for DKE credit
 - Take RL for CE credit

- **M.Sc. in Autonome Systeme**

Future of Robotics from Hollywood's Perspective

Can we create humanoid robots like this?

Humanoid Robots: Are they becoming reality?

- 1921 Karel Capek's play "Rossums Universal Robots"
- 1927 Years after Fritz Langs movie "Metropolis"
- 1961 Joseph Engelberger's first industrial robot arm
- 1977 C3PO and R2D2 win our hearts...
- 1996 Honda represents the first full humanoid robot

Humanoid Robotics: How can we make them do something?

- Several hundred different humanoid robots have been designed!
- Why don't we see them **outside research labs**?
 - **Programming** robots is a **LOT** of work
 - There is **no general concept** of how we can **automatically create motor skills** to date!

Learning is needed to incorporate **autonomous robots** in our **every-day's life**

Robots needs Machine Learning!

- “I have always said that the time for robot learning would come later. [...] Analytical robotics has barely moved for ten years. The time for learning is now.”

Oussama Khatib, Stanford University, 10/17/2006

- “Robot learning is the single most important problem in robotics.”

John Hollerbach, University of Utah, 12/7/2007

What can robots learn?

Motor Skills

**Autonomous Control
(e.g. airplanes)**

Acrobatic in der Luft kann mit Apprenticeship Learning gelernt werden wie hier von Pieter Abbeel [University of California in Berkeley] sowie Adam Costes, Morgan Quigley und Andrew Ng [Stanford University].

**Rehabilitation/FES/
Prosthetics**

**Localization and
Mapping**

**Object
Manipulation**

Locomotion

What can robots learn? Motor Skills!

Starting at the Autonomous Systems Labs “Taster course” as scientist

Among the most important questions ever:

continue the research road to a Ph.D. (=Dr.)?

The personal and professional advantages are enormous!

An exciting life:

follow *your* ideas & dreams...

actively acquire knowledge and refine it...

enjoy international conferences and visits with collaborators around the world...

However, it ain't for everybody!

Your Master's thesis will already decide on your chances!

➔ **Do you wanna figure out whether there is a researcher in YOU?**

Basic Idea: Be a researcher

Mini-Class

- The lecture “Robot Learning” serves as background!
- We give you a few suggestions on platforms and algorithms.

Your idea becomes your project! This can only be fun!

Your creativity is what will make it an amazing experience for both you & us!

Write a Scientific Paper

How to WRITE PUBLISH & a SCIENTIFIC PAPER

5th EDITION
Robert A. Day

ORYX

Do a mini-conference!

To which real conferences we have send our IP Students!

Just a few examples...

- IROS @ Chicago
- ICRA @ Seattle
- ICRA @ Hong Kong
- Humanoids @ Korea
- IROS @ Japan

What we offer....

We offer you a glimpse how life as a researcher in robot learning is like!

- Use the **knowledge from the robot learning** lecture right away!!!
- Decide what problem you are interested in and implement it in our simulator.
- Write a “**Scientific Paper**” as a team!
- Have a mini-conference at the semester’s end...
- Great work makes it into real conferences!
- Perfect start for your **Masters** or **Bachelors Theses**.

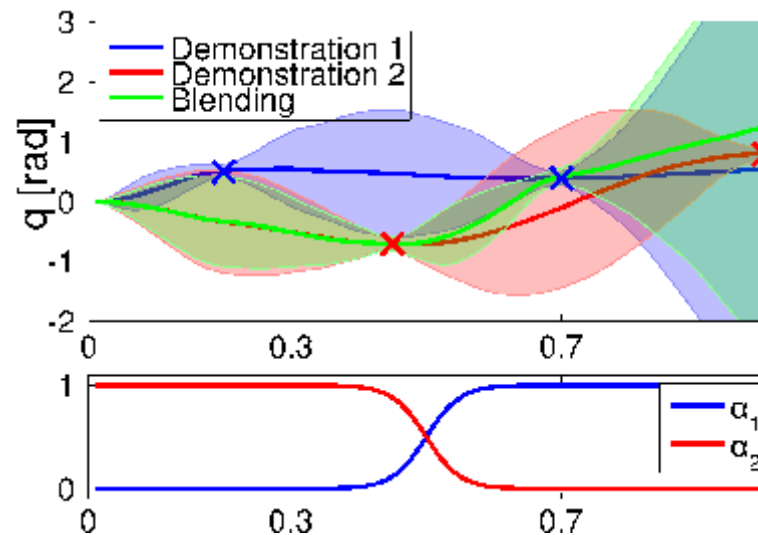

You are getting a taste how research life is like!

What we also offer....

Master and **Bachelor** thesis or also smaller projects

- For possible projects, see our [homepage](#)!
- Interested in your own topic? Just talk to us!

Looking for HiWi's

You are experienced **in C++ and/or Matlab?**

- We are always searching for **good software engineers**
 - Work with real **robots, implement interfaces for robot control**
 - Extend and document a **software library for robot learning**
 - Implement state of the art robot learning algorithms in Matlab
 - Good start **to get to know the field and our lab**
- ➡ And earn some nice pocket money :)
