Learning Human-Robot Interaction from Human-Human Interaction

Handovers – Essential Skill for Collaborative Robots

Bimanual Handovers

Multi-Sensor Datasets of Bimanual Human-Human Handovers

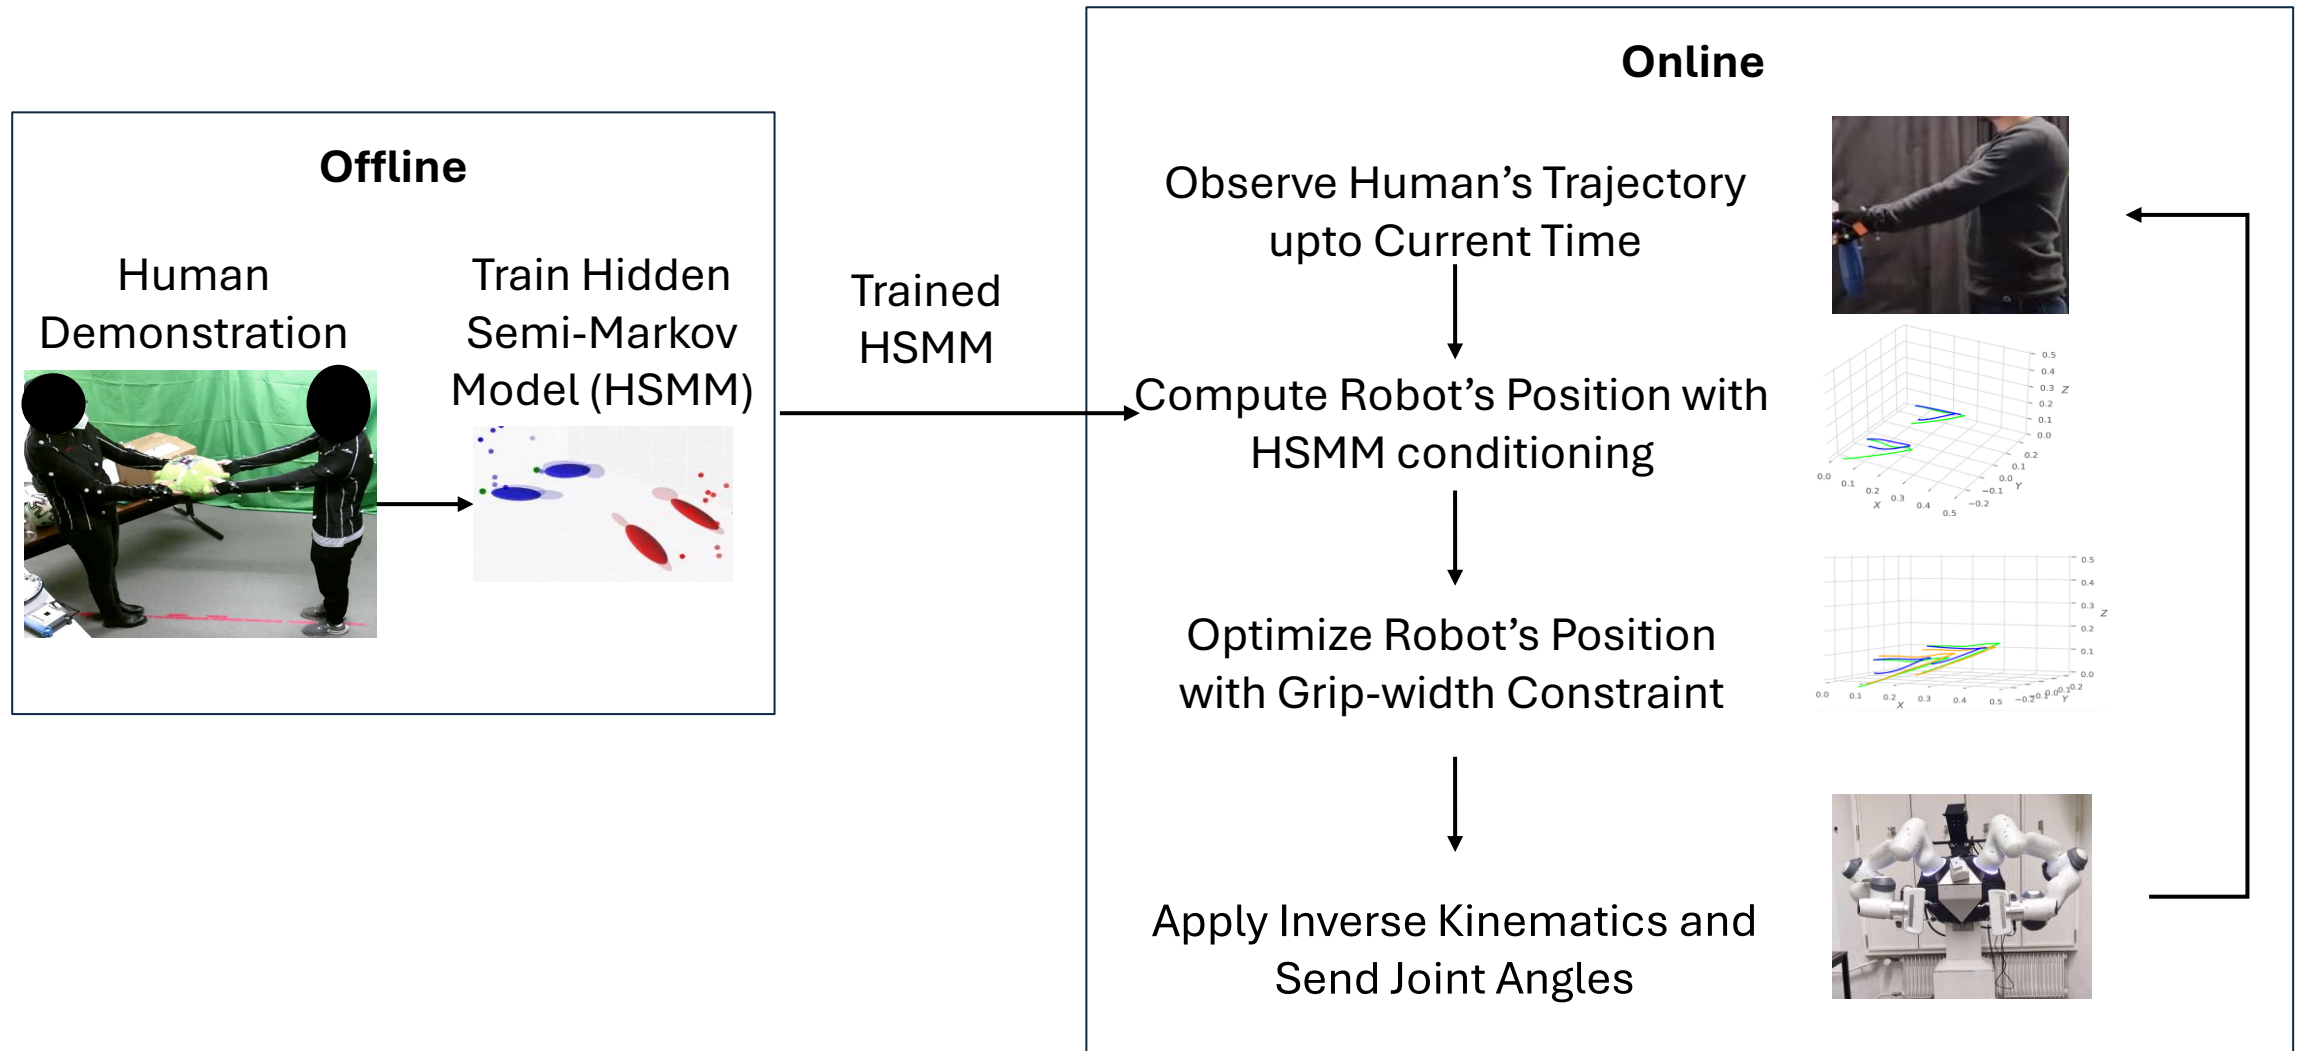

Dataset 1: 24 participants, 10 objects, 360 handovers

Dataset 2: 24 participants, 30 objects, 1440 handovers
(shelving / un-shelving tasks)

Learning Bimanual Robot-to-Human Handovers

Learning Bimanual Robot-to-Human Handovers

Preliminary Study (4 participants, 3 objects)

| Metric Scale 1-5 | Baseline Median | Proposed Median |
|---------------------|--------------------|--------------------|
| Humanlike | 1 | 2 |
| Sensible | 2 | 3 |

$p\text{-value} < 0.05$

Limitation: Inaccurate transitions between segments

Limitations

Separate model for each interaction

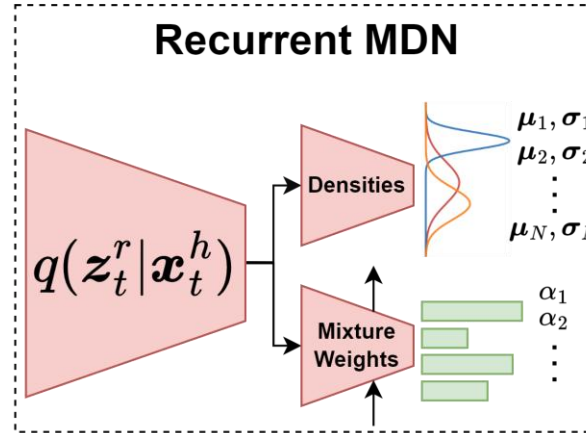

Limited representation capabilities of GMMs

Mixture of Variational Experts for Interactions (MoVEInt)

Mixture of Variational Experts for Interactions (MoVEInt)

Human

$$\hat{\mu}_t^r = \sum_{i=1}^N \alpha_i(\mathbf{x}_t^h) \mu_i^r(\mathbf{x}_t^h)$$

$$\hat{\sigma}_t^r = \sum_{i=1}^N \alpha_i(\mathbf{x}_t^h) \sigma_i^r(\mathbf{x}_t^h)$$

$$p(\mathbf{z}_t^r | \mathbf{x}_t^h) = \mathcal{N}(\mathbf{z}_t^r | \hat{\mu}_t^r, (\hat{\sigma}_t^r)^2)$$

Texture Recognition With Vision-Based Tactile Sensors

Task: Find reference fabric among comparison fabrics in **as few touches as possible**

Proposed method: Tactile Active Recognition of Textures (TART)

Idea: Perform **multiple rounds of exploration** and **continual model fine-tuning**

Re-sampling Strategies: Touch the next fabric based on the **model uncertainty**

1. **Variance Strategy**
2. **Entropy Strategy**
3. **Random Strategy**
4. **You Only Touch Once (YOTO) Strategy**

Texture Dataset

**200 texture images each for 25 denim and cotton fabrics
(hard to distinguish by touch)**

Human Study Setup

Blindfolded participants (n=10) explore the fabrics by touch

Results

| Humans | <i>Variance</i> | <i>Entropy</i> | <i>Random</i> | <i>YOTO</i> |
|-------------------|--------------------------|-------------------|-------------------|-------------------|
| 66.88% ±16.93% | 90.00% ±15.24% | 88.13% ±14.24% | 89.38% ±14.35% | 80.63% ±22.42% |

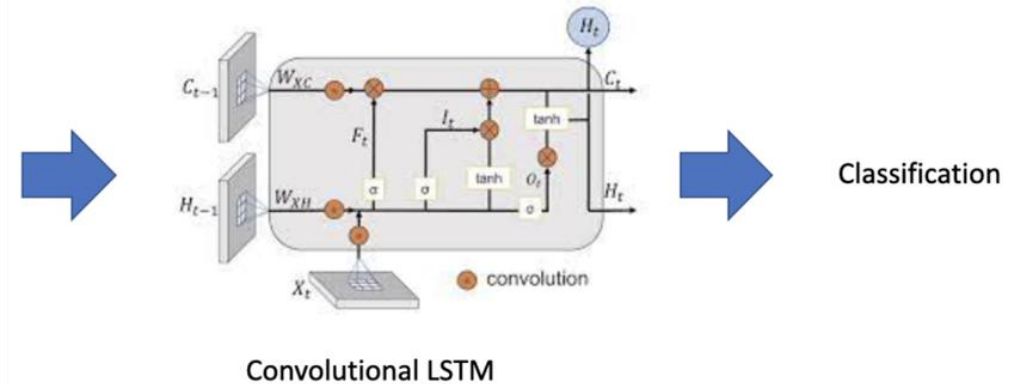

Hardness Classification

Task: Find the comparison object **closest in hardness** to the reference object

5 frames of 320x240
selected per push

Hardness Classification

Hardness Similarity Judgements

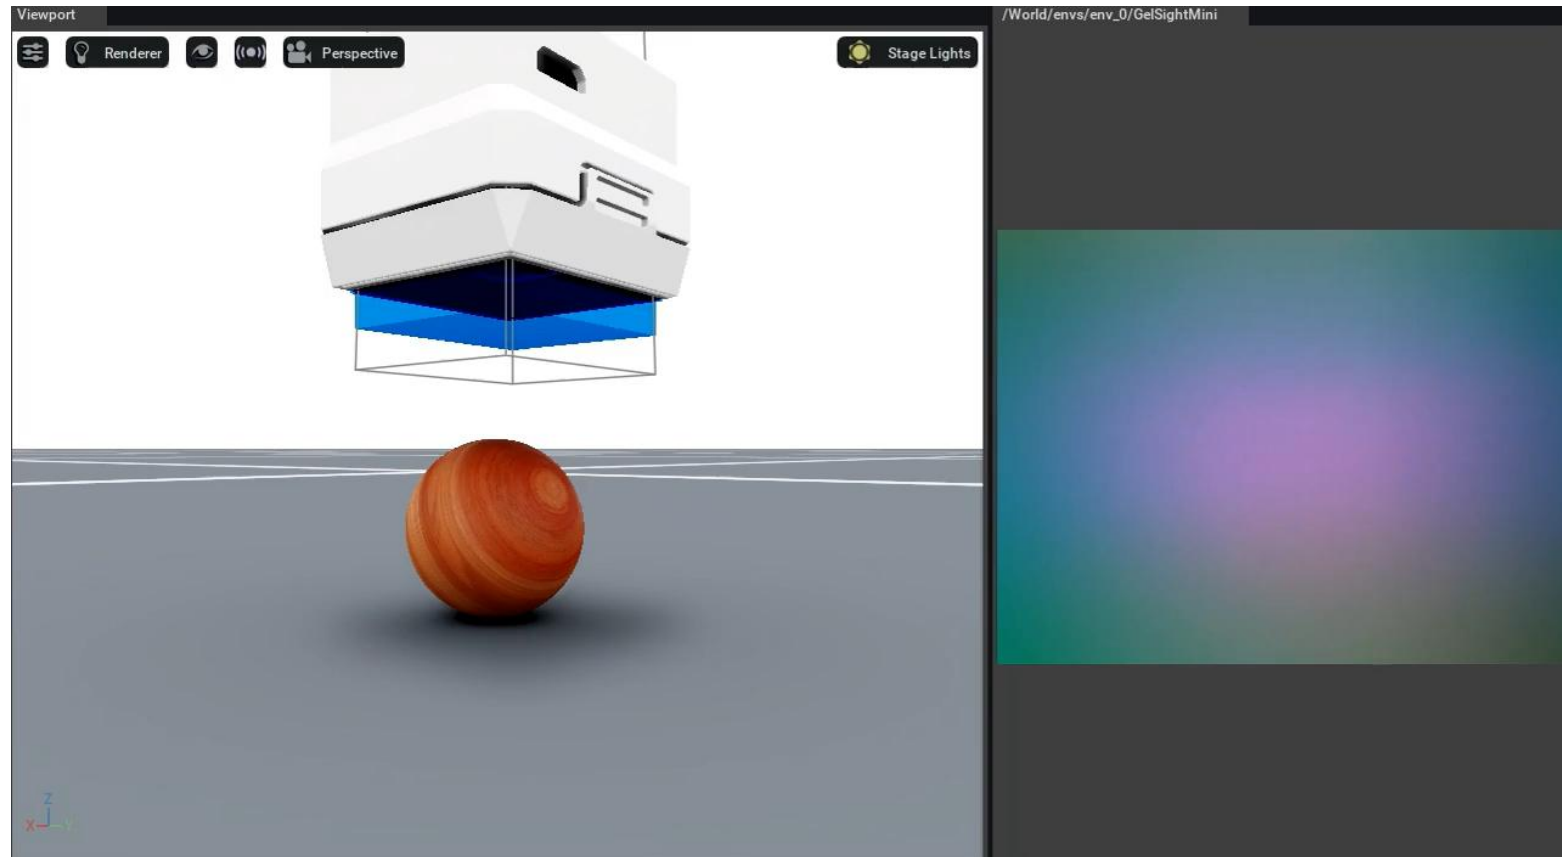

| Robot (1 touch) | Robot (20 touches) | Humans (1-20 touches) |
|------------------------|------------------------|--------------------------|
| 50.00% $\pm 9.18\%$ | 76.33% $\pm 4.33\%$ | 80.25% $\pm 9.14\%$ |

Ongoing Work: Simulation of Vision-based Tactile Sensors

Integration of Taxim [Si and Yuan 2022] in Isaac Sim for GelSight Mini sensor
(rigid bodies and compliant-contact)

Ongoing Work: Simulation of Vision-based Tactile Sensors

Soft-body Gelpad Simulation in Isaac Sim
